

Epigenetic Age Estimation in a Deepwater Scorpionfish, Blackbelly Rosefish

D.N. Weber^{1*}, A.T. Fields¹, D.W. Chamberlin², W.F. Patterson III², D.S. Portnoy¹

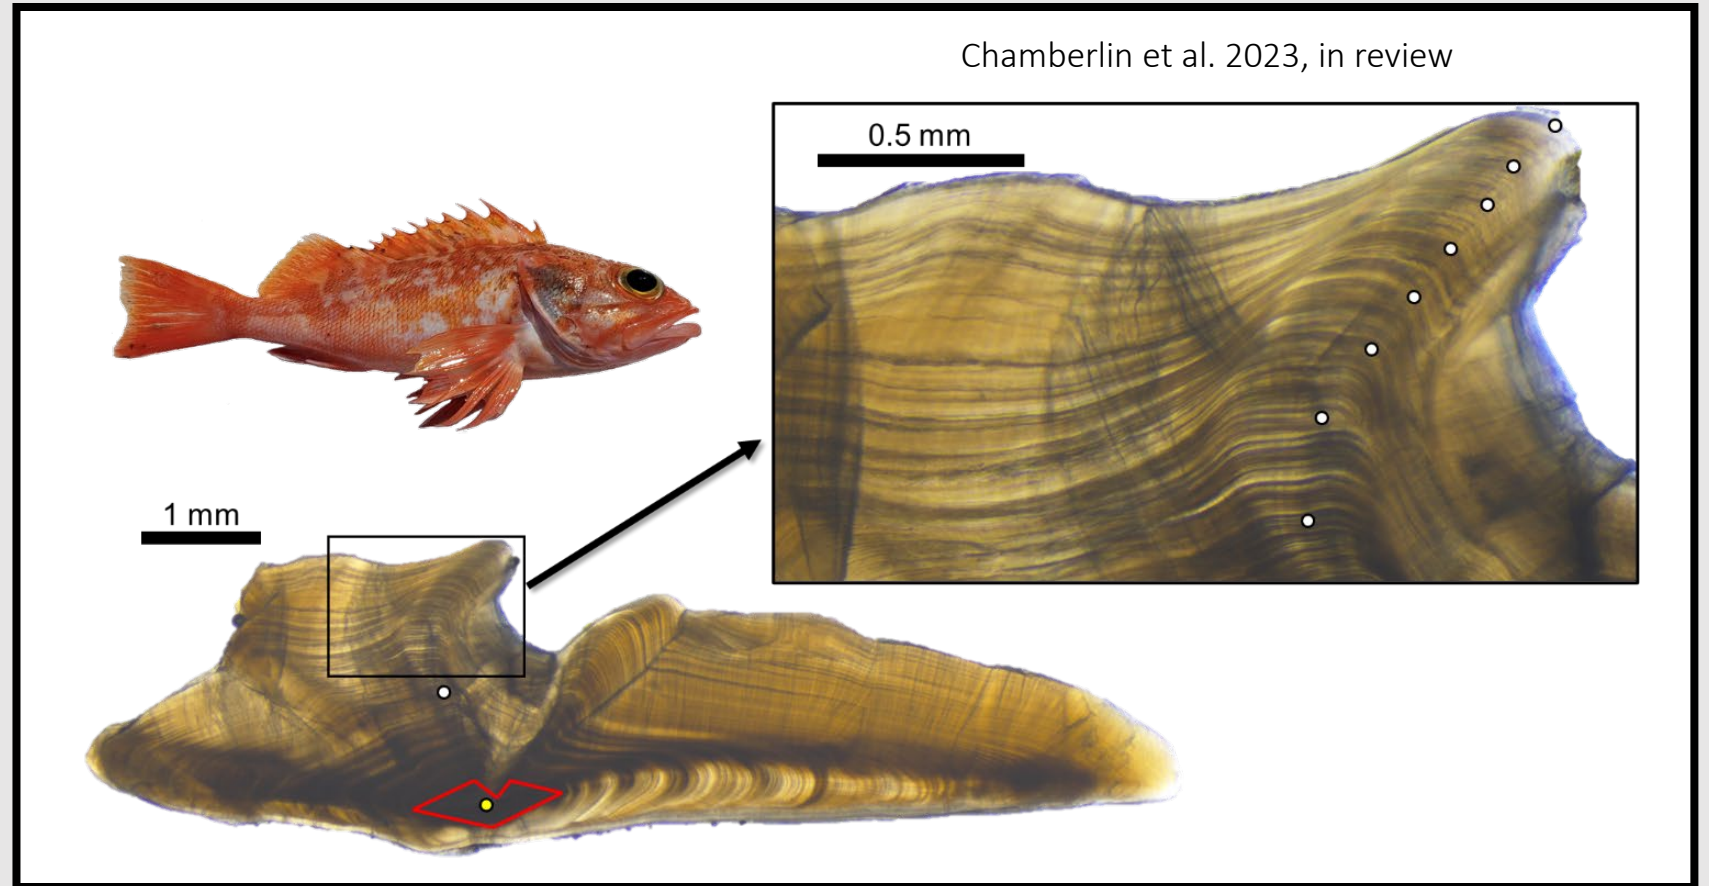

¹*Marine Genomics Laboratory, Texas A&M University–Corpus Christi*

²*Fisheries & Aquatic Sciences, University of Florida*

Deepwater fishes can be difficult to age using traditional techniques

- Slow growth rates
- Long life spans
- Constant environment

→ Alternative age estimation method?

What is Epigenetics?

Mechanisms that affect gene expression without altering DNA sequence

DNA Methylation

- Addition of CH_3 to cytosine, often at CpG sites
- Typically acts to repress transcription
- Changes in DNA methylation at select CpG sites correlate with age
→ Epigenetic clocks!

Epigenetic Clock History

2019: European seabass

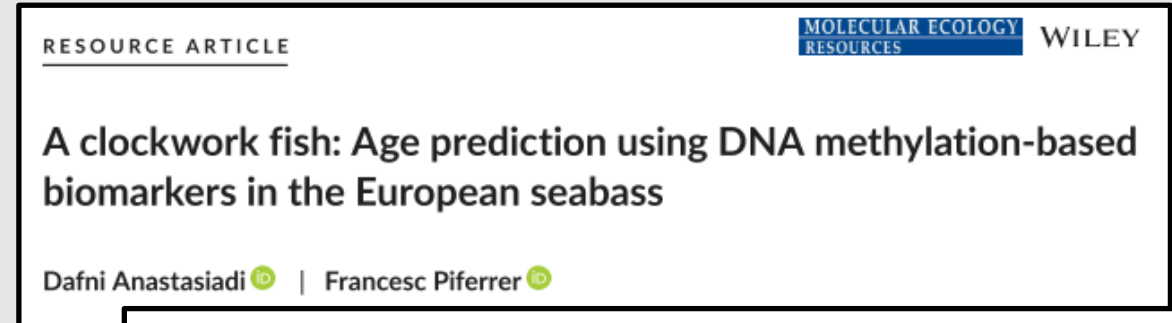

- Reared in laboratory

2020: Zebrafish

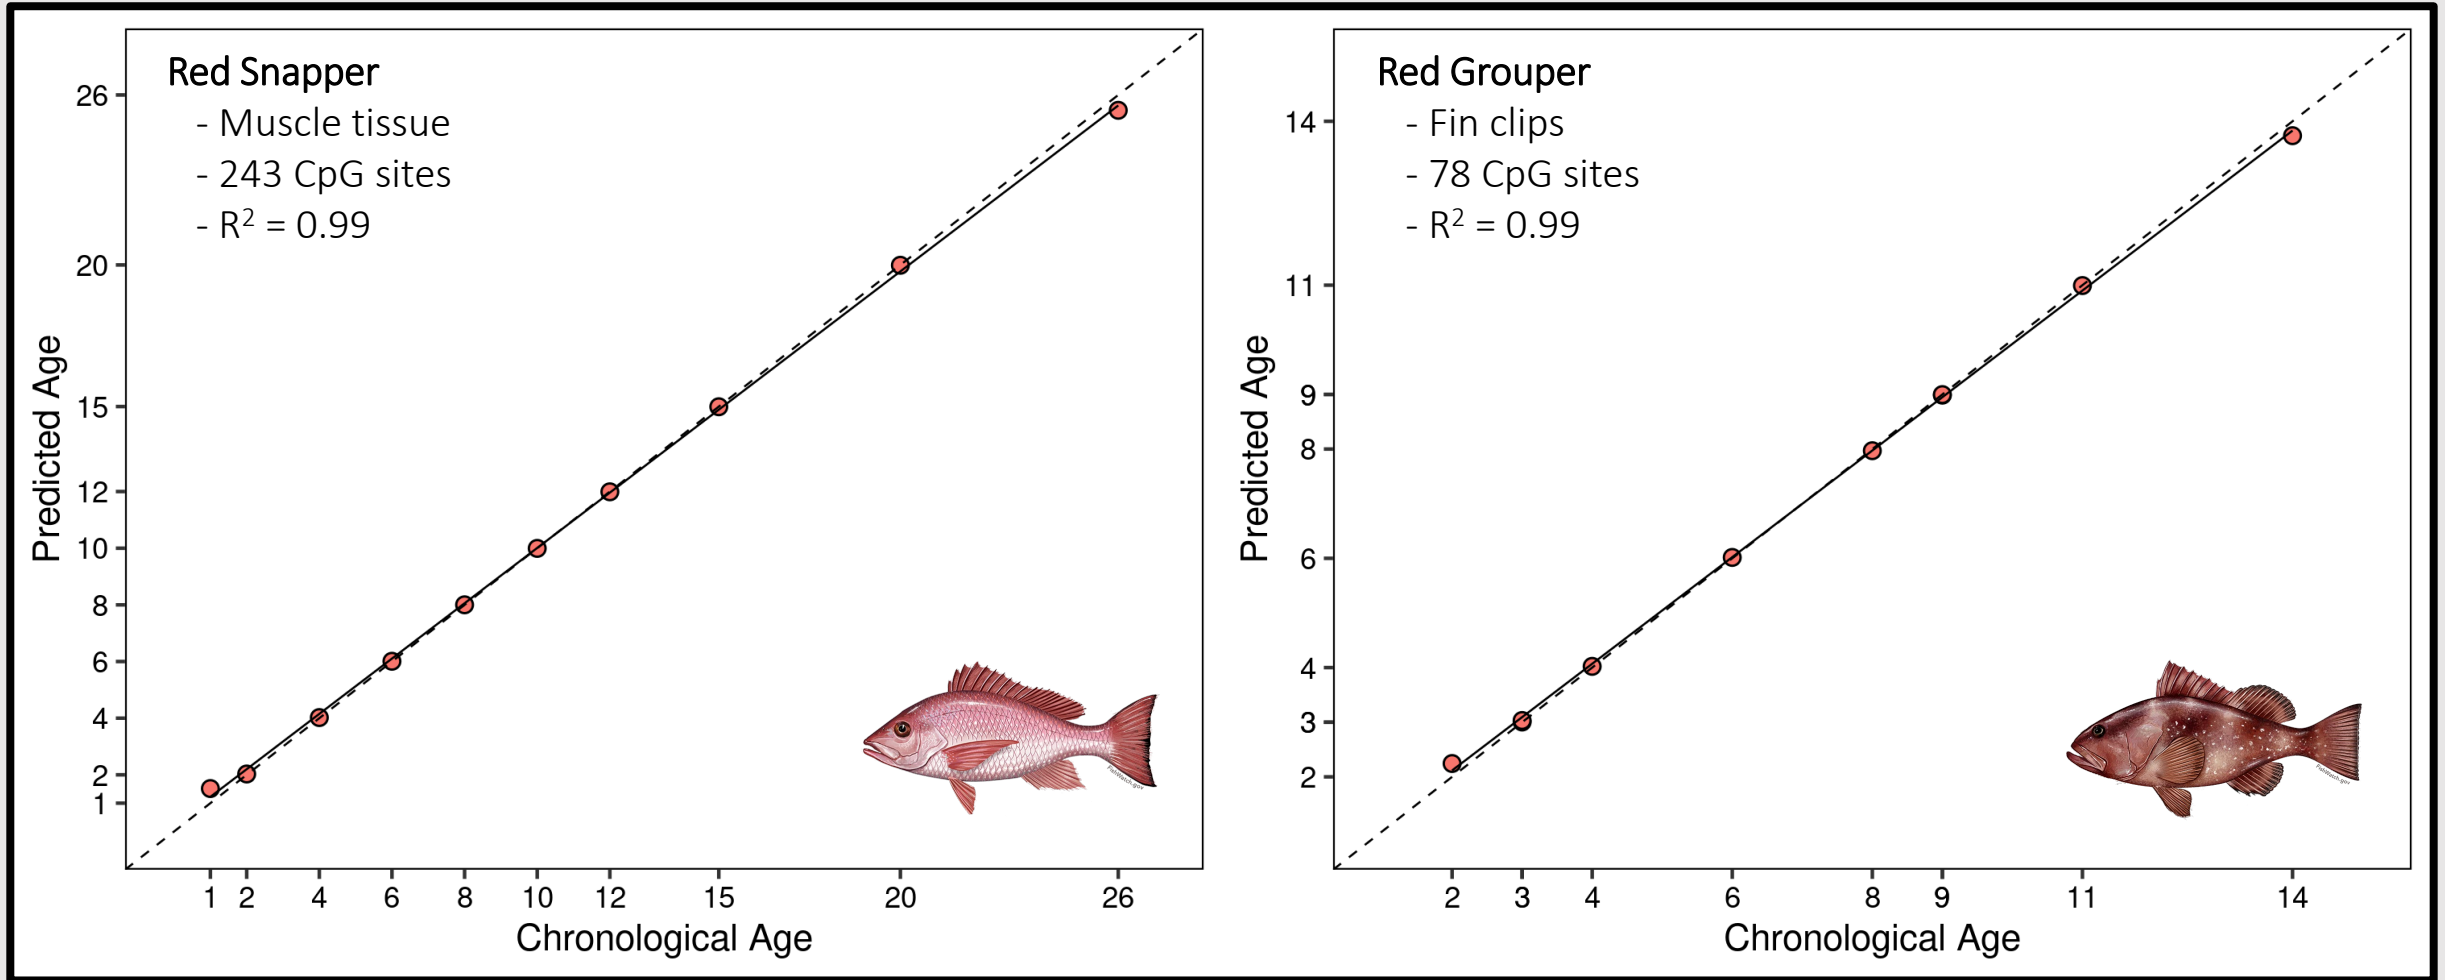

- Reared in laboratory

2021: Australian lungfish and cod

- Used zebrafish CpG sites

Novel epigenetic age estimation in wild-caught Gulf of Mexico reef fishes. 2022. D. Nick Weber, Andrew T. Fields, William F. Patterson III, Beverly K. Barnett, Christopher M. Hollenbeck, David S. Portnoy. *Can. J. Fish. Aquat. Sci.*, **79**:1–5.

1: Can this epigenetic ageing technique be applied to a deepwater fish?

2: Are age-correlated CpG sites shared across tissue types
(fin clips and muscle tissue)?

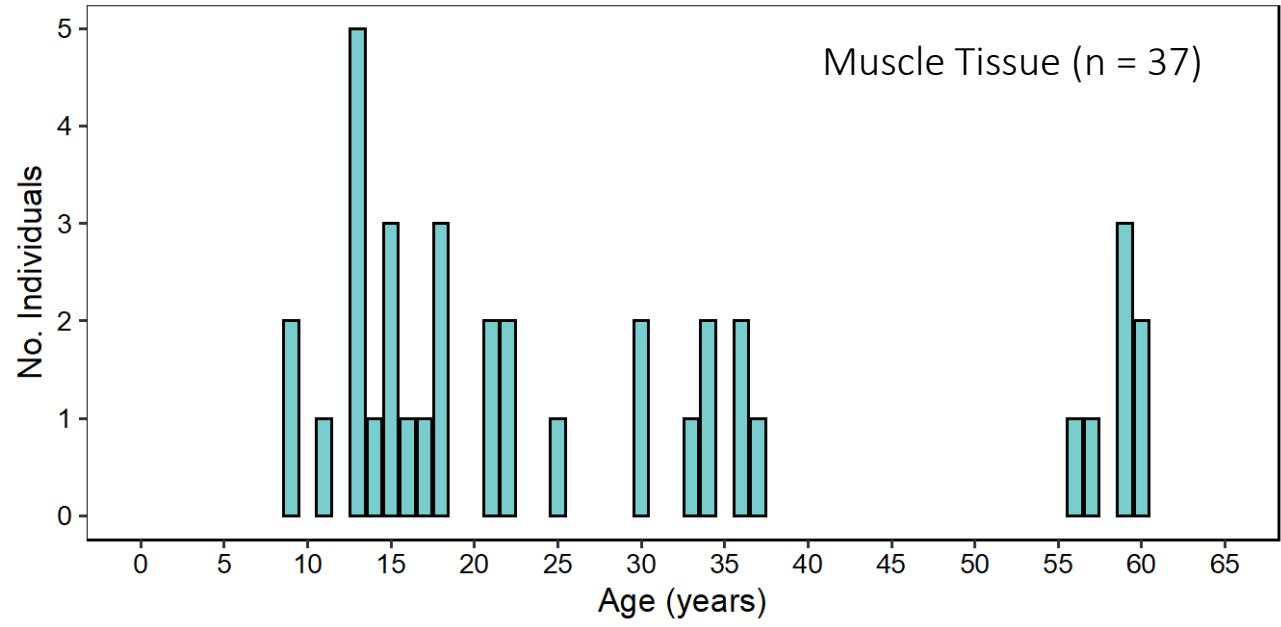

Blackbelly Rosefish

Helicolenus dactylopterus

- Deepwater scorpionfish (150 to 600 m)
- Long-lived (>90 years)
- Widely distributed in Atlantic Ocean
 - Potentially in Indian Ocean
 - Likely several subspecies in Atlantic
- Difficult to age

61 individuals

- 56 fin clip samples
- 37 muscle tissue samples

All ages bomb ¹⁴C-validated
(range: 9 to 60 years)

Genomic Approach

bsRADseq: bisulfite-converted restriction site-associated DNA sequencing

Reference from
Untreated DNA

Bisulfite
Treated DNA

- C** Matches: Methylated C's
- T** Mismatches: Unmethylated C's

Data Analysis

1) Identify all CpG sites that exhibit age-correlated methylation

Bayesian GLM

- Age as fixed factor
- Sample as random factor
- $\frac{\text{\# methylated reads}}{\text{\# total reads}}$ as response
- 95% HPDI's

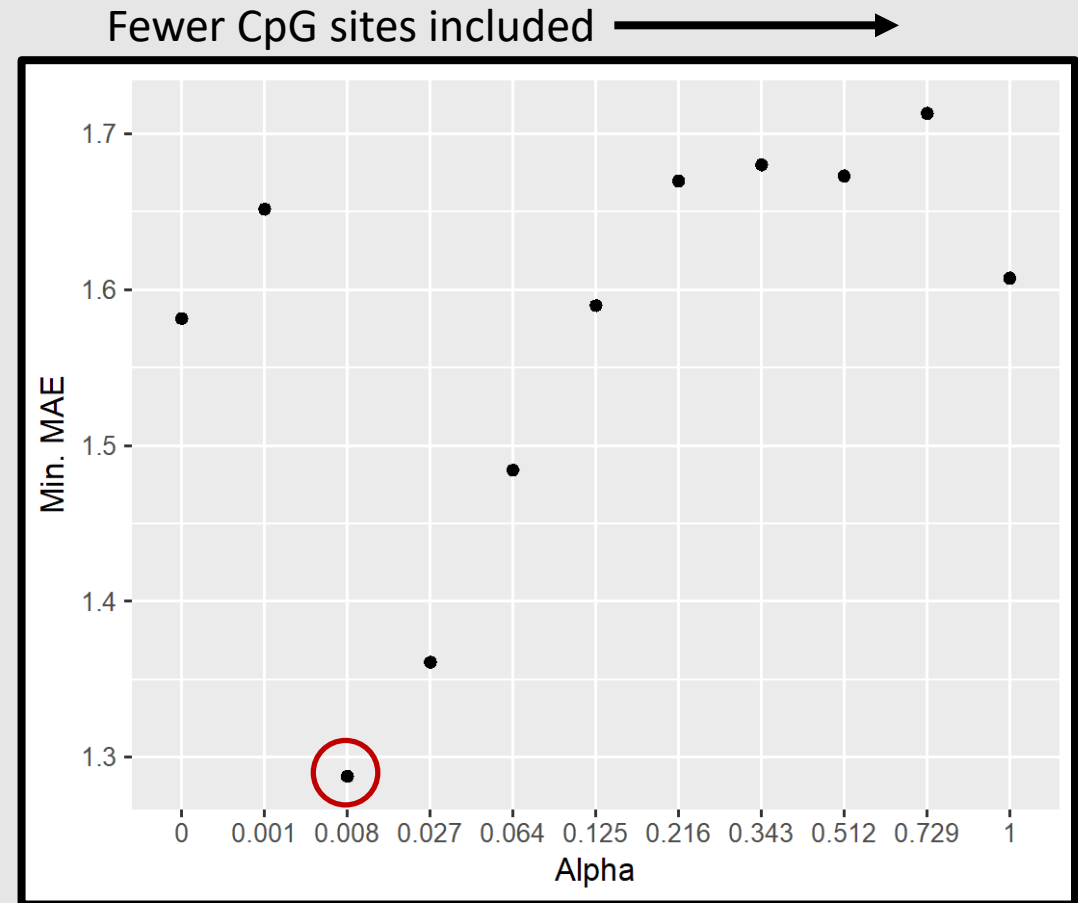

2) Identify the subset of CpG sites that best predict age

Penalized Regression

using “elastic net” version of `glmnet` in R

- Penalty (α) ranges from 0 to 1
- α can be optimized
- Tuning parameter (λ) influences penalty strength
- λ is internally cross-validated

Preliminary Results

No. raw CpG sites: 2,959,164

Model	n	Age Range (Years)	No. CpG Sites Post-Filtering	No. CpG Sites Age-Correlated	No. CpG Sites in Final Model
Fin Clip	56	9–59	156,529	10,139	315
Muscle	37	9–60	115,569	5,886	623
Combined Tissues	61	9–60	129,916	15,071	524

Bayesian Model

Elastic Net Regression

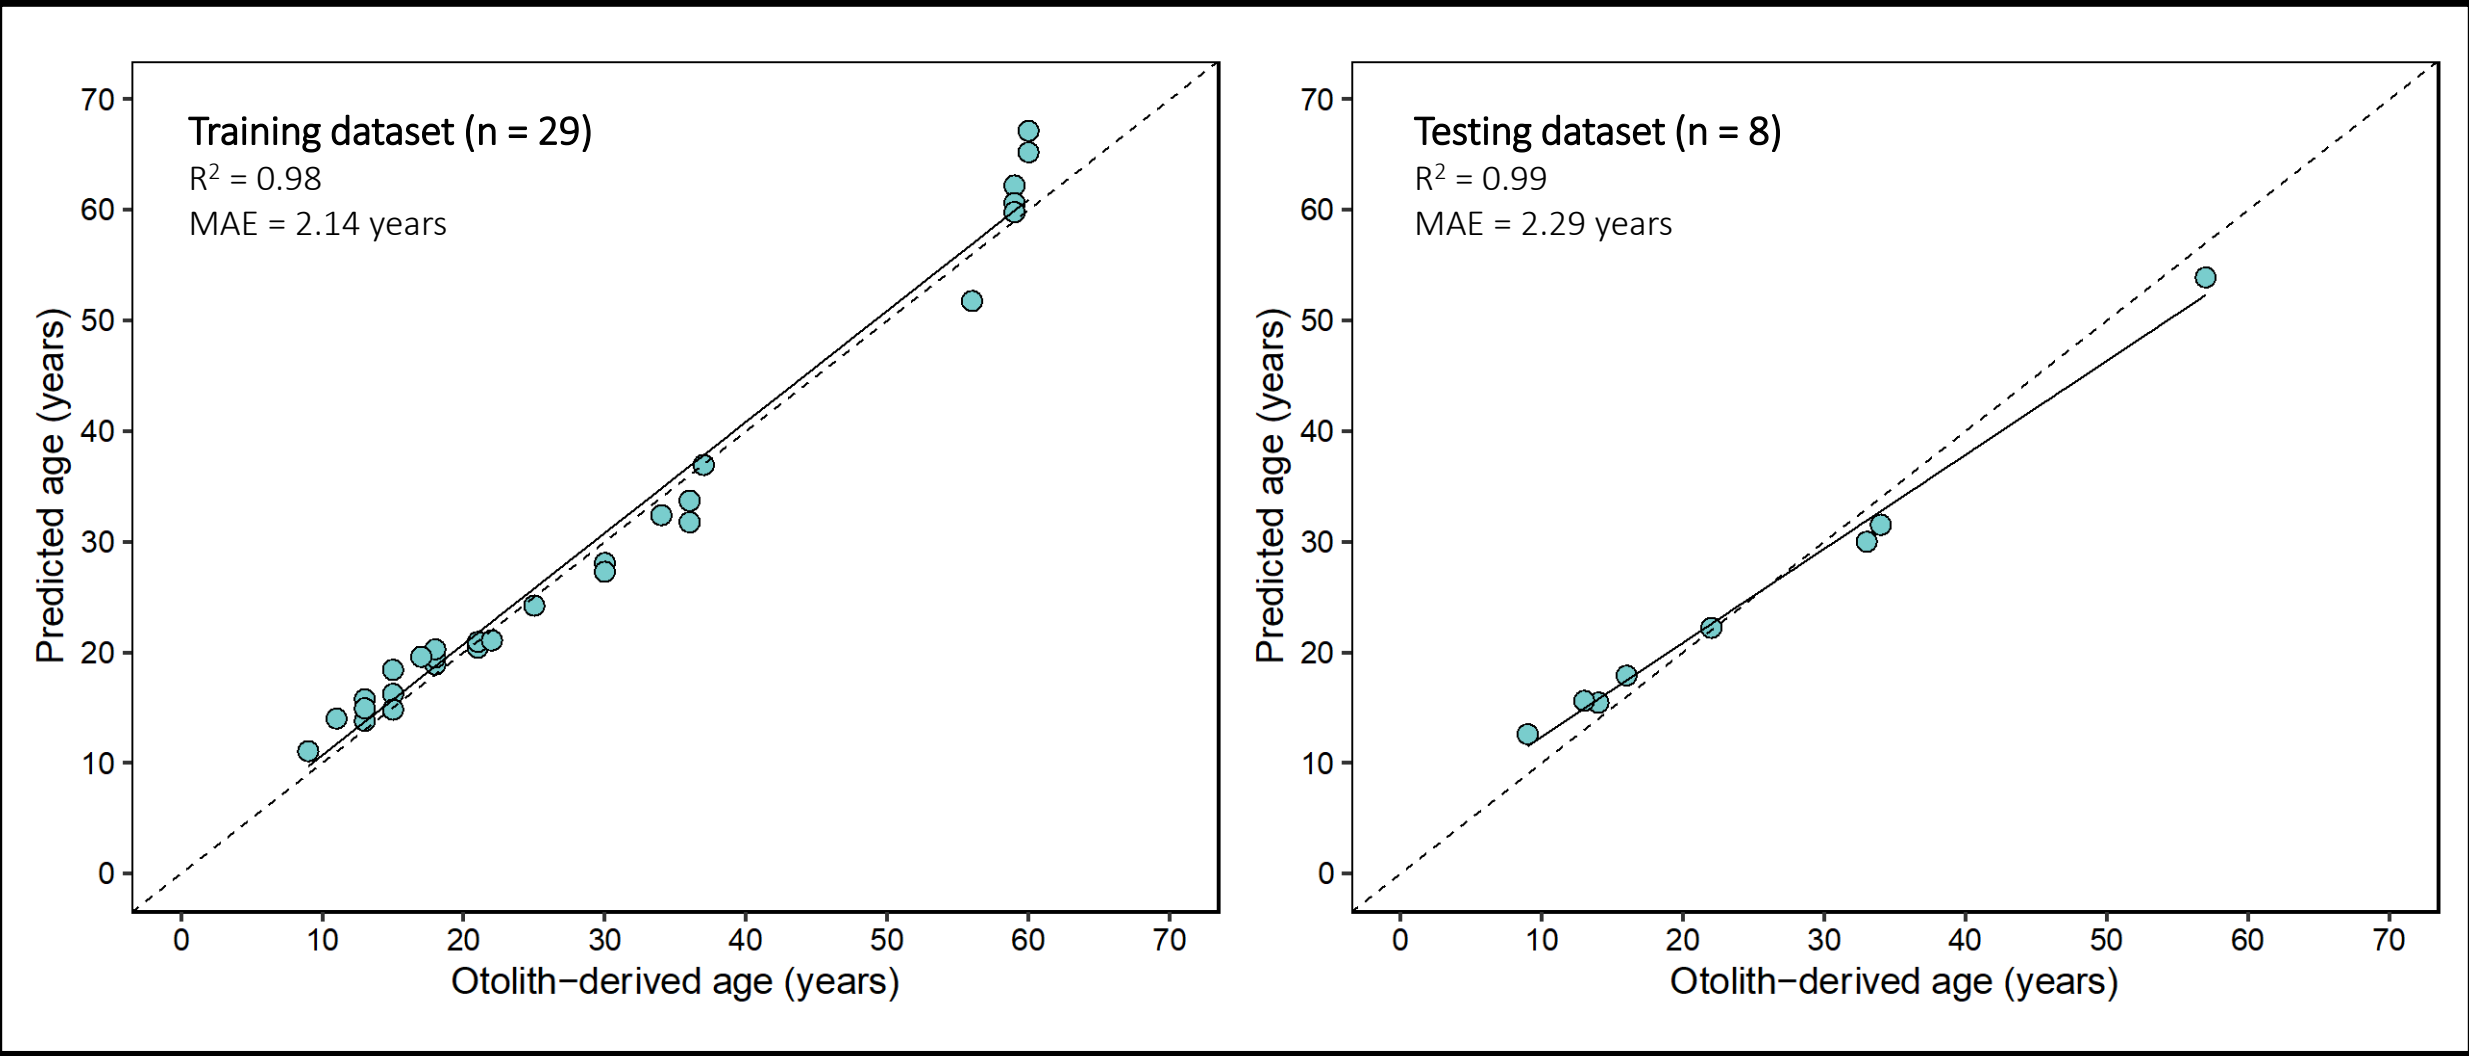

Fin Clip Clock

- 56 individuals
- 315 CpG sites

Muscle Clock

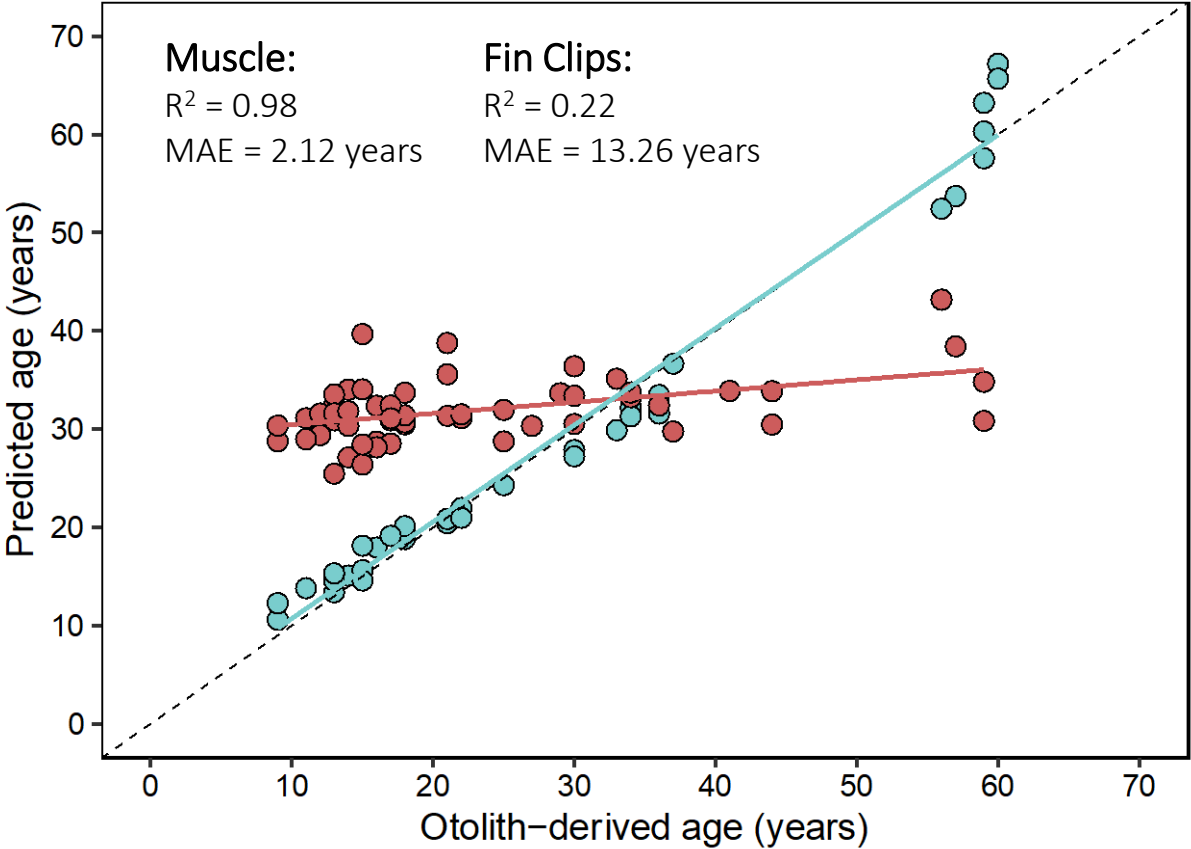

- 37 individuals
- 623 CpG sites

Predicting Muscle from Fin Clip Clock

Predicting Fin Clip from Muscle Clock

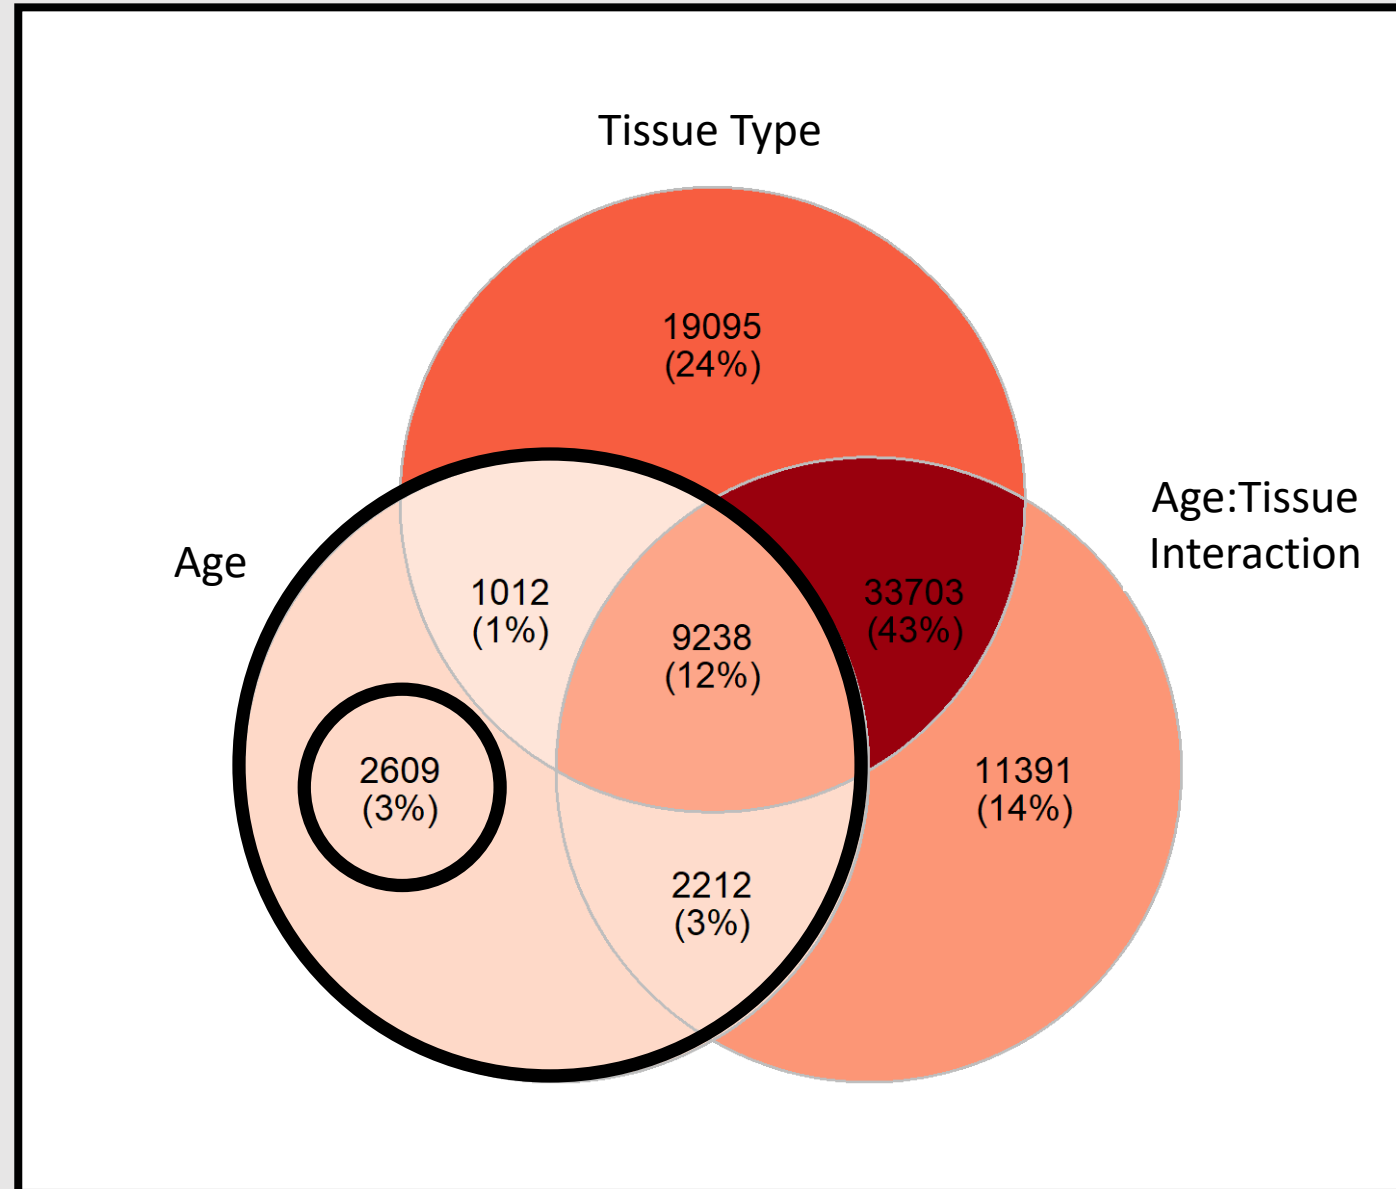

Tissue Type ● Fin Clip ● Muscle

Combined Tissue Clock

Bayesian GLM

- Age as fixed factor
- *Tissue type as fixed factor*
- Sample as random factor
- $\frac{\# \text{ methylated reads}}{\# \text{ total reads}}$ as response
- 95% HPDI's

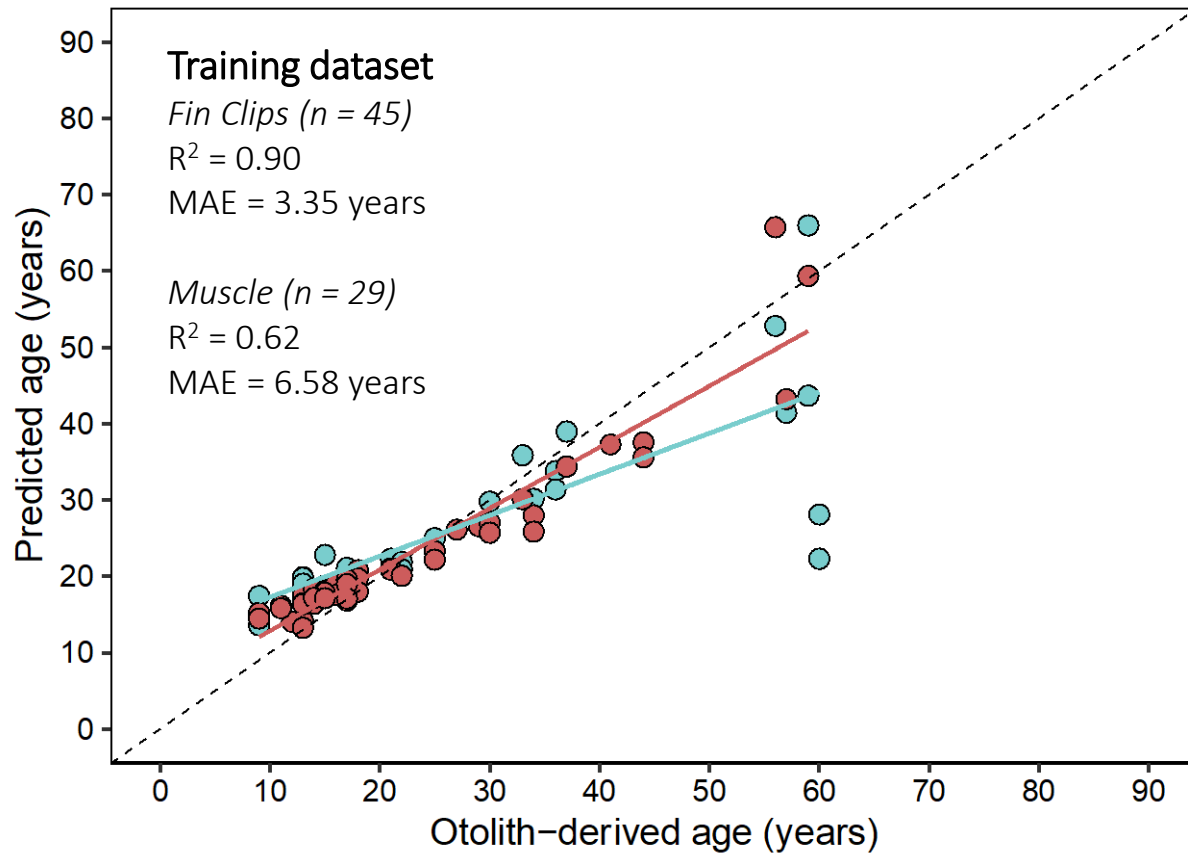

Combined Tissue Clock

- 524 CpG sites

Tissue Type ● Fin Clip ● Muscle

Combined Tissue Clock

- Leave-one-out
- 524 CpG sites

Fin Clip:

$R^2 = 0.92$

MAE = 3.05 years

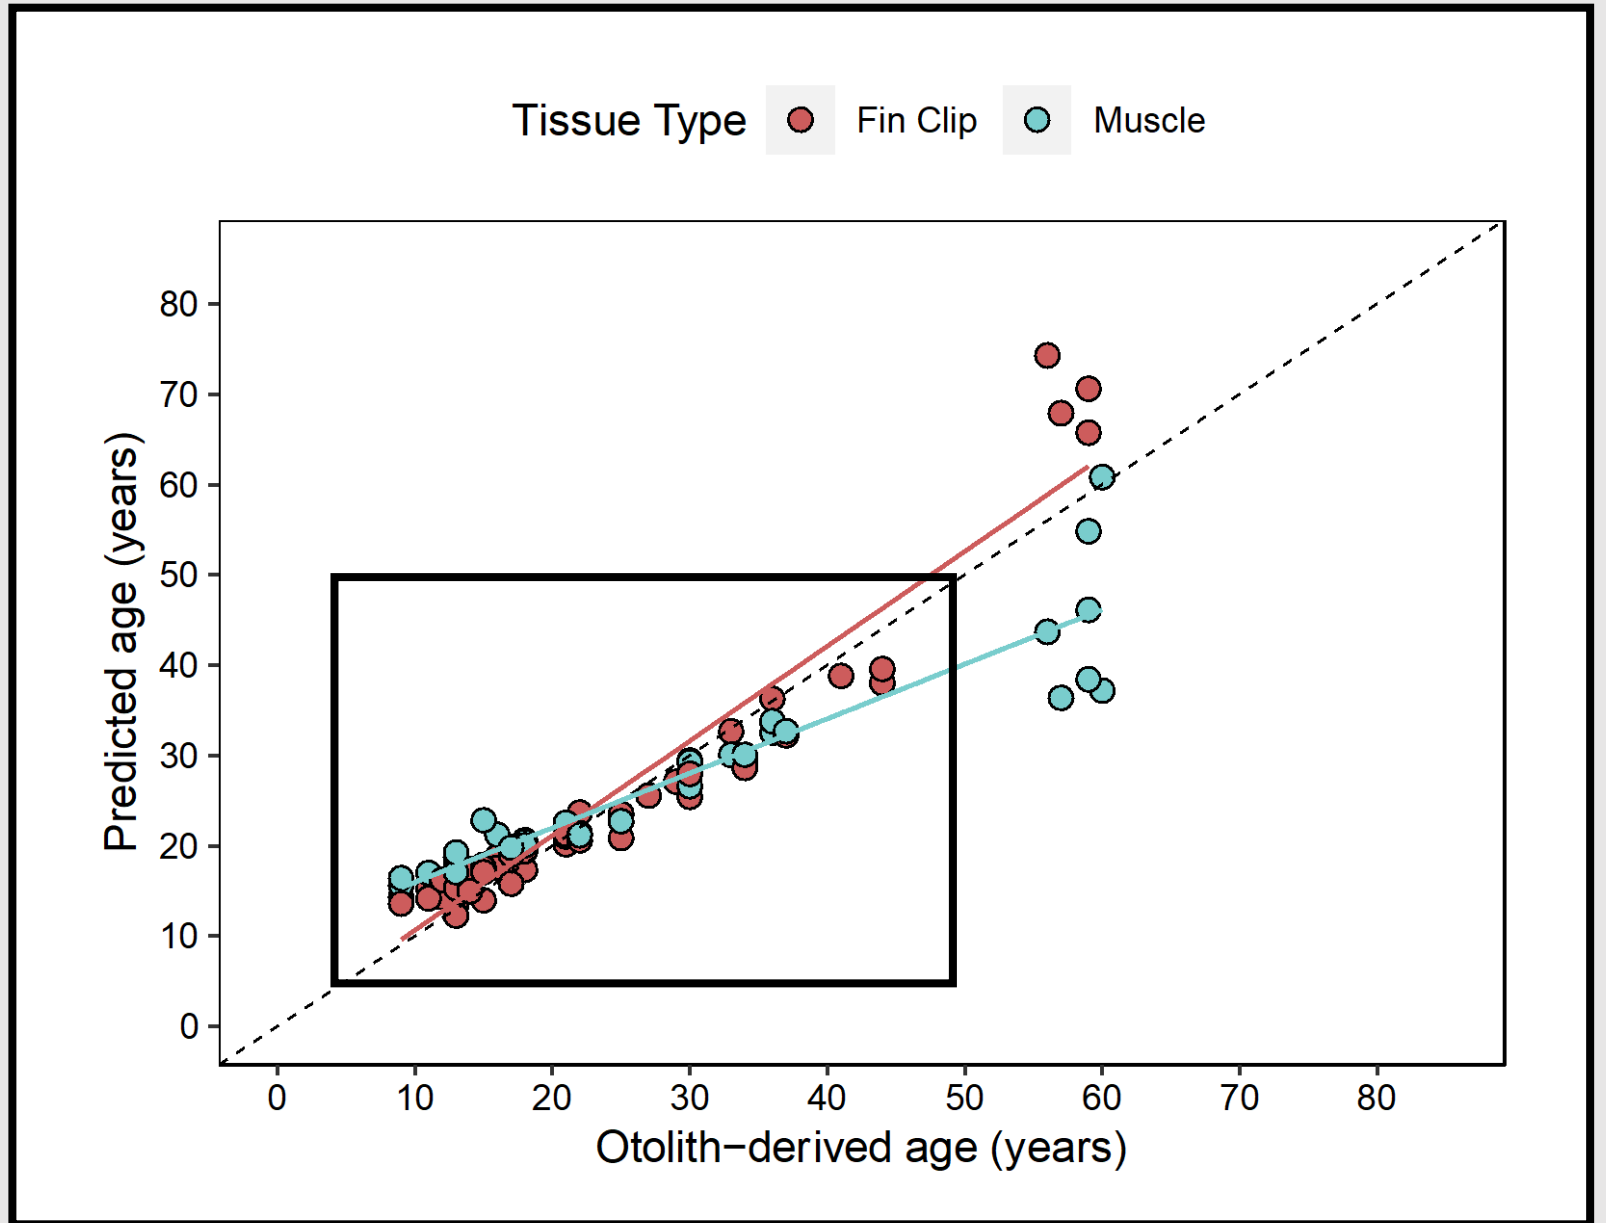

MAE for ages <50 = 2.37 years

Muscle:

$R^2 = 0.87$

MAE = 5.55 years

MAE for ages <50 = 3.70 years

Conclusions

- Accurate epigenetic clocks can be developed for deepwater fishes
- Age-correlated CpG sites were identified across tissue types, suggesting the potential for a multi-tissue clock

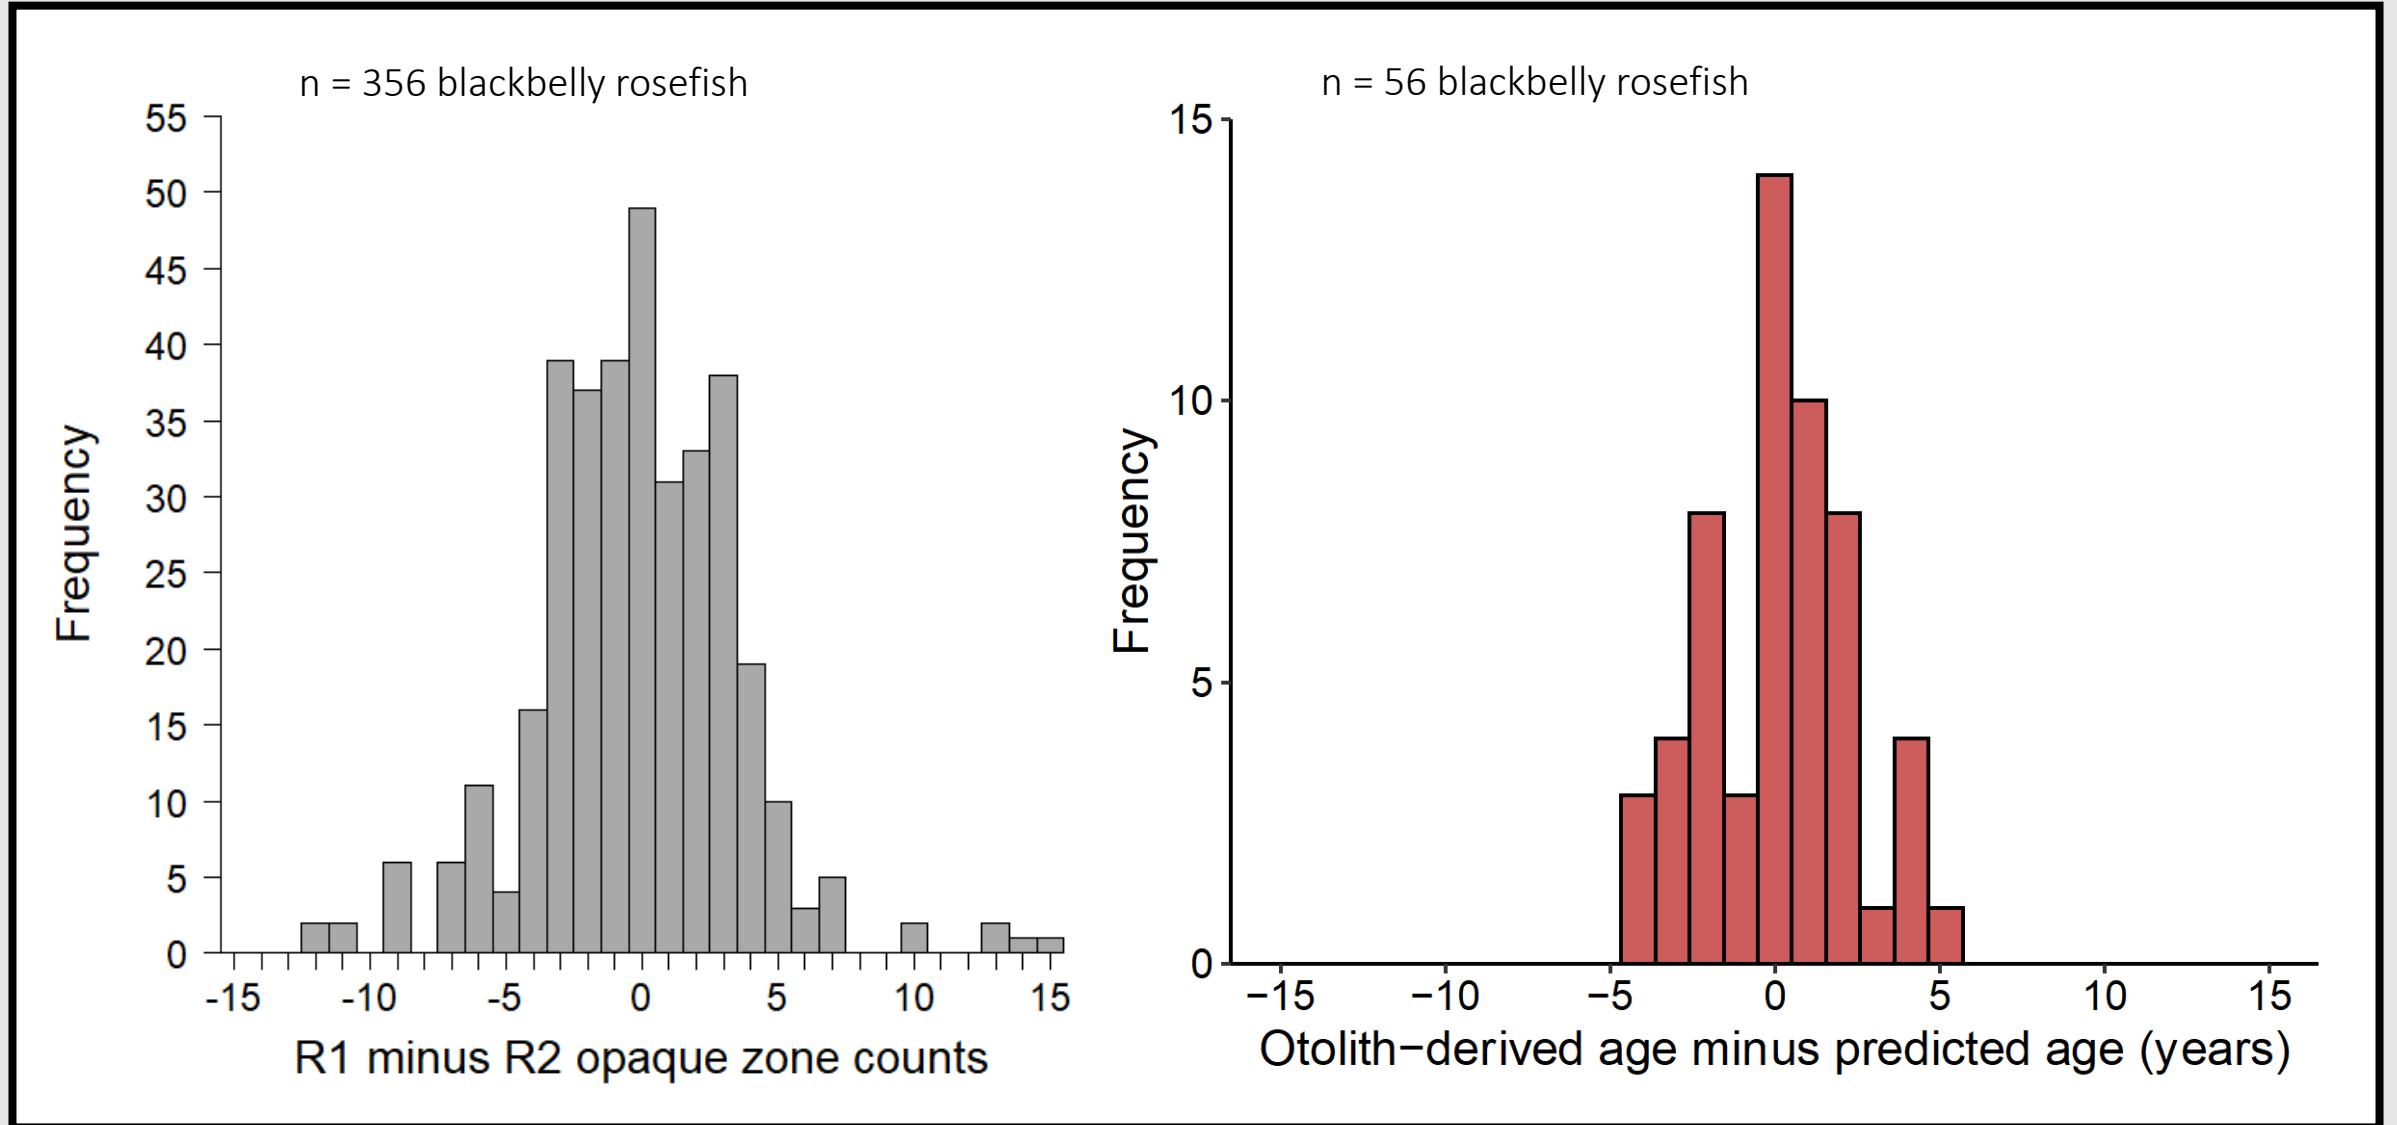

Potential Benefits

- Non-invasive
- More time- and cost-efficient generation of age estimates
 - \$10 per sample
 - Age thousands of individuals per month
- Accurate/precise for difficult to age species
 - MAE = 1.51 years in fin clip clock

Application to Fisheries Management

Goal: more time- and cost-efficient ageing approach

- bsRADseq is necessary to develop epigenetic clock (i.e. determine CpG sites of interest)
- Once identified, simply target those CpG sites in subsequent individuals using multiplex PCR

NOAA
FISHERIES

CpG sites of interest!

...GCATCGATCGTTAGCTG...

CGTAGCTAGCAATCGAT

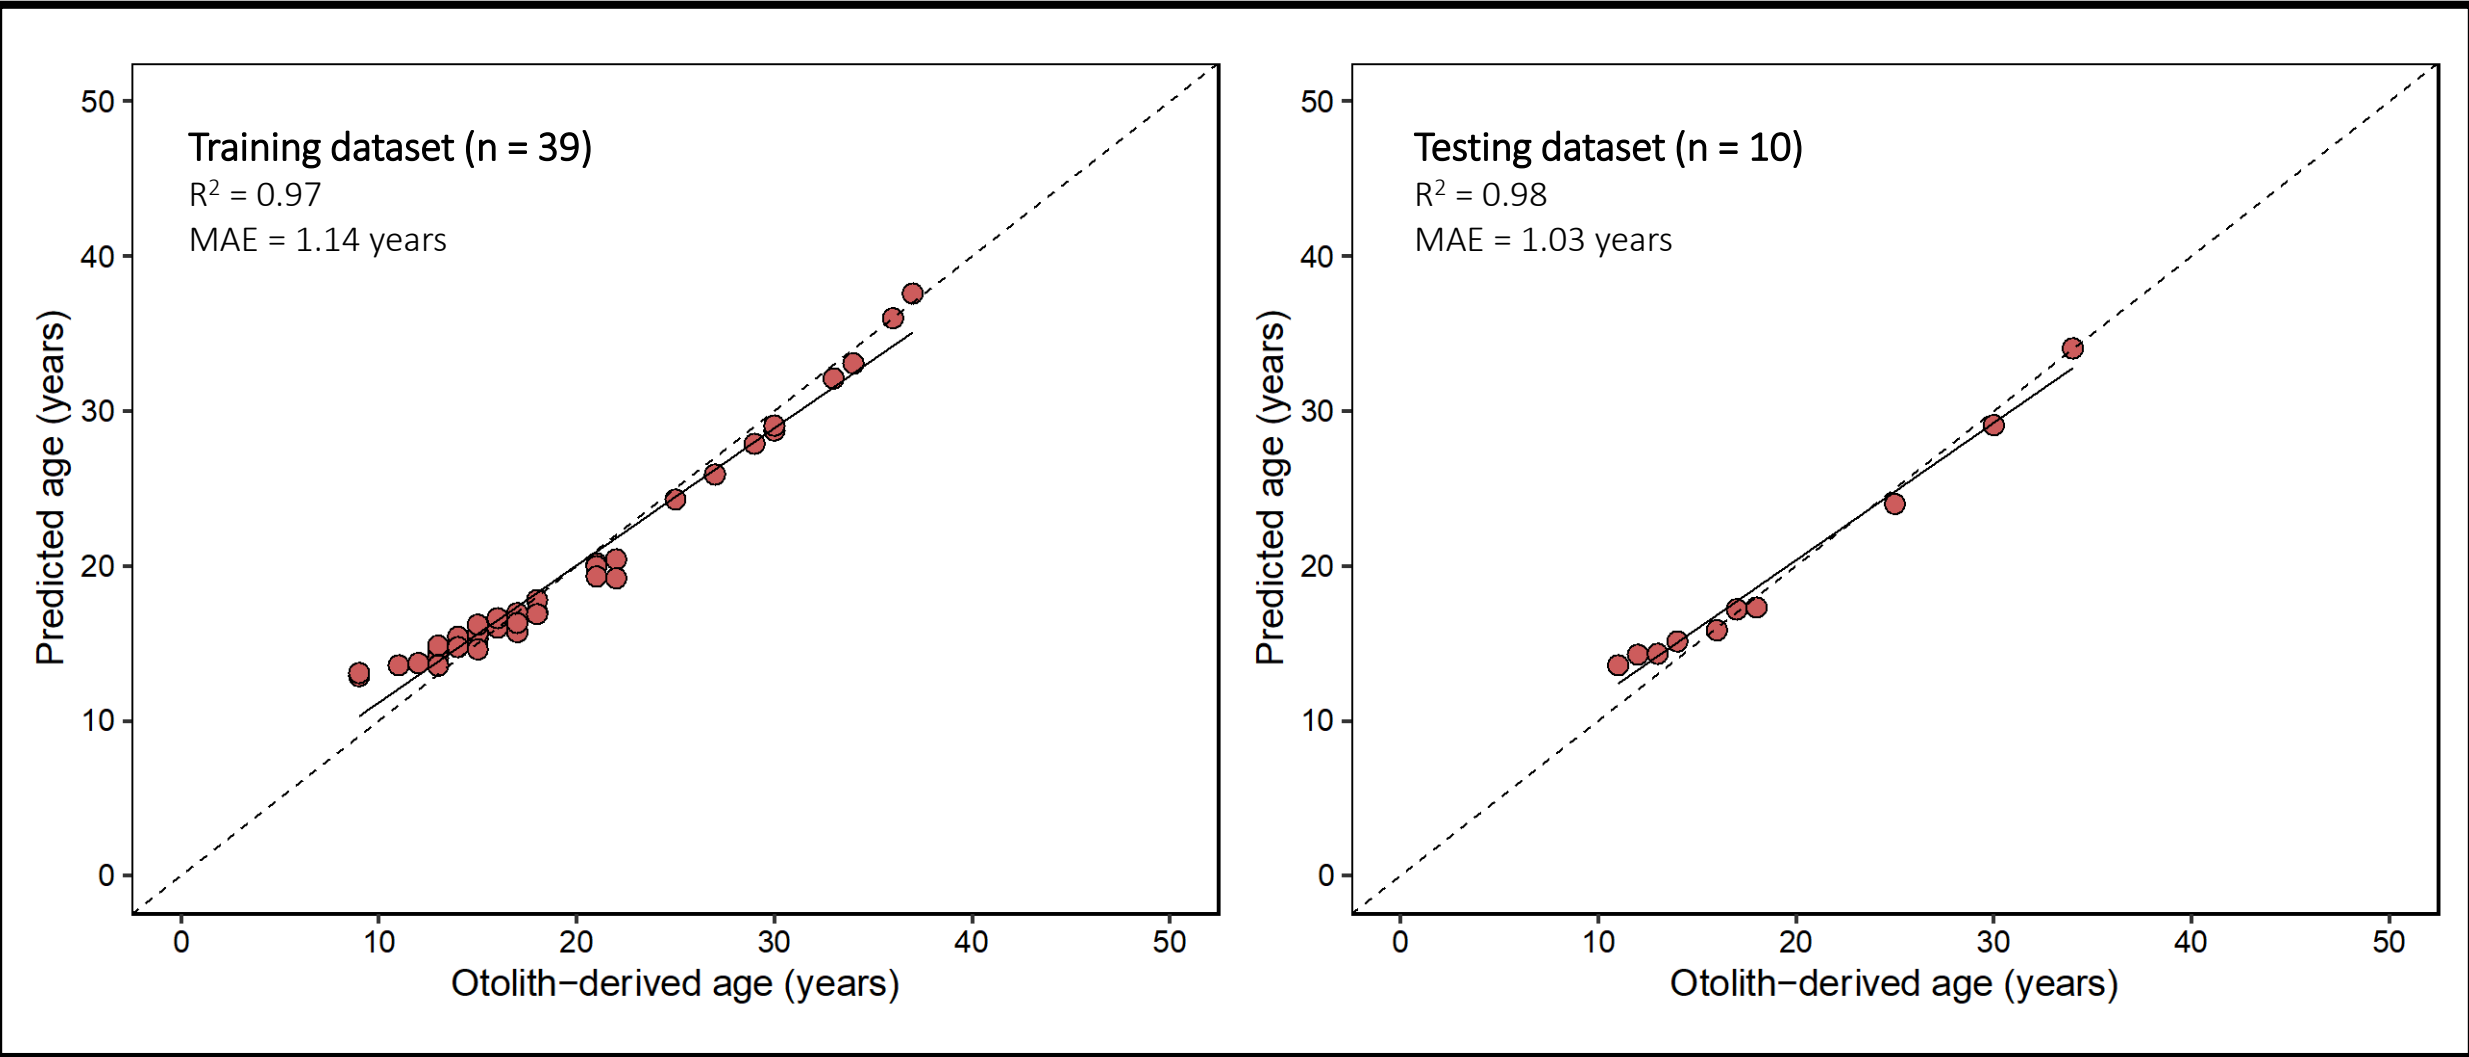

...GATCGATTGTTACTC...

CTAGCTAAGCAATGAG

- Design primers (25 bp in length) to target age-correlated CpG sites
- Target up to 500 CpG sites in thousands of individuals at one time
- Age tens of thousands of individuals per month (\$10 per individual)

Fin Clip Clock for Individuals <40 Years Old

- 49 individuals
- 222 CpG sites

Model Training Testing
